This Talk

- Part I — Computing
- Part II — Computing at SCU
- Part III — Today's activity

PART I — COMPUTING

What is Computing?

- Analysis, design and development of computer systems
- It is not just about programming
- It teaches you how to think more methodically and how to solve problems more effectively

Computing is everywhere!

What is Computing?

- Computing includes a variety of fields:
 - Mathematics
 - Computer science
 - Computer engineering
 - Information science
 - Electrical engineering

What is Computing?

- What is a computer professional?
 - Will I have to grow fuzzy hair?
- What does s/he do?
 - Will I have to sit in front of a computer all day?
- What kind of people will I work with?
 - Will I have to become a geek nerd?

What is Computing?

- FUN, COOL, and EXCITING
 - Cutting edge projects
 - Exciting and talented people
 - All over the world, in every sector
 - Significant impact on society and our planet

Why Study Computing?

- **Intellectually interesting**
 - Logical reasoning and mathematical thinking
 - Possible workings of the human mind

Why Study Computing?

- **Computing supports and links to most other areas of study**
 - Computing and neuroscientists – the brain
 - Computing and Biologists – Genome
 - Computing and Meteorologists – weather prediction
- Future scientists require basic knowledge of Computing

Why Study Computing?

- **Computing teaches problem solving**
 - Decomposition, abstraction, modular design
 - Analysis and design are carefully reviewed
 - Always new methods being investigated

Why Study Computing?

- **Computing builds teamwork and leadership skills**
 - Plan, organize, control, lead complex projects
 - Learn to deal with mix of talents
 - Estimate and deal with risk
